

Itensil

Itensil is introducing our newest product at Office 2.0. Itensil Business Lifecycle Manager (BLM) is a breakthrough architecture that seamlessly manages functions across their lifecycles. As a lifecycle progresses - typically from a concept through maturity - Itensil BLM provides smooth transition between the freeform collaboration of a wiki and structured work as appropriate. It provides a liquid environment that keeps everyone on the same page, sharing data and best practices, with visibility of all moving parts. We're working with Solution Partners in markets that range from professional services sales to outsourcing, marketing campaigns, emergency response and clinical research - with several white label applications in end user trials. Please visit www.itensil.com, and meet us at the conference to learn more.
