

# Postful

---

**About Postful:** Postful expands the concept of Software as a Service to include manufacturing and physical processes, in this case printed mail. By making print a part of the cloud, any application or website can send letters or postcards just by sending emails or API requests. Postful makes billions of mailboxes as easily reachable as any web address. Founded in 2006, Postful is launching out of beta at the Office 2.0 conference. Please visit [www.postful.com](http://www.postful.com) for more information.
